

The background is a dark navy blue. On the left, there is a large, semi-transparent circular graphic containing a detailed image of a computer circuit board. Overlaid on the top-left of this circle are two overlapping triangles: a blue one in the foreground and a light green one behind it. In the top-right corner, there is a faint, high-contrast image of a circuit board's traces. The main title is centered in white text, and the subtitle is positioned below it to the right.

# What is a Browser Extension?

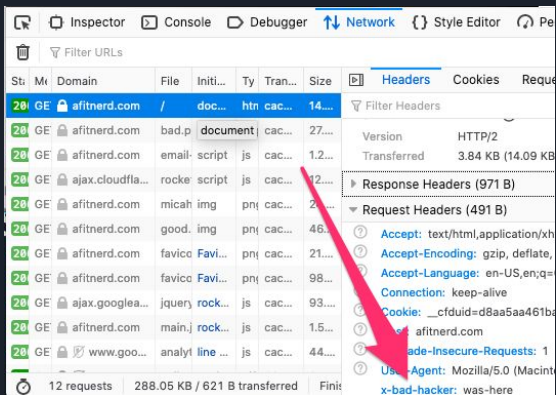

[https://en.wikipedia.org/wiki/Browser\\_extension](https://en.wikipedia.org/wiki/Browser_extension)

A browser extension is a small software module for customizing a web browser.

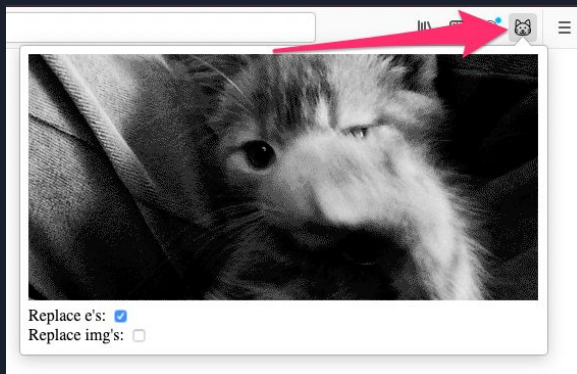

# Anatomy of a Browser Extension

`manifest.json` file describes:

# History of Browser Extensions

`chrome.webRequest.onBeforeRequest`

`browser.webRequest.onBeforeRequest`

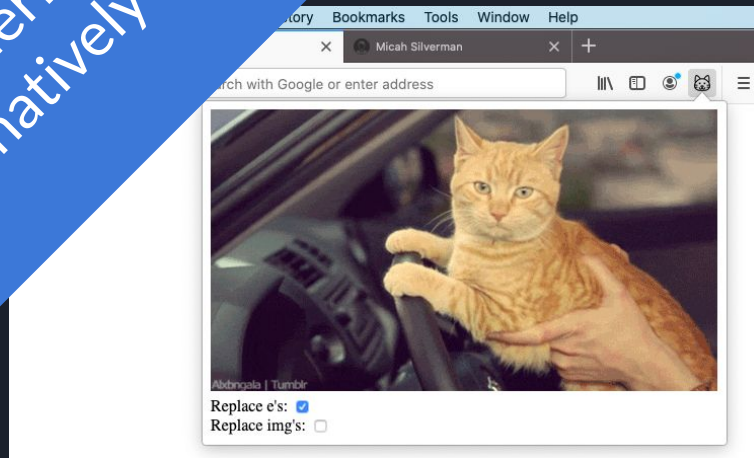

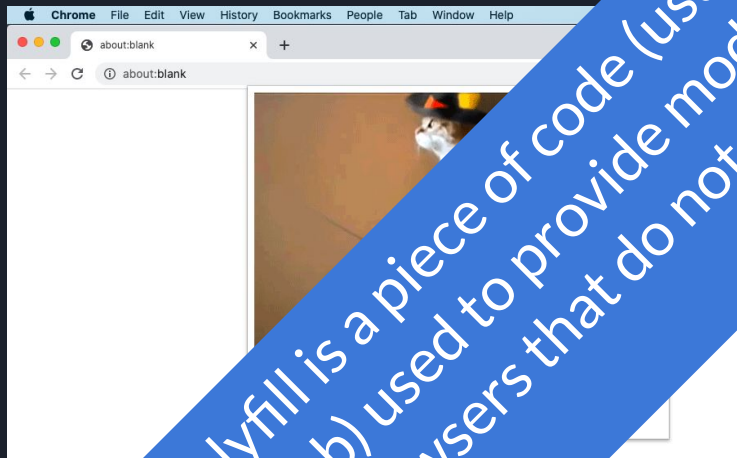

# History of Browser

`browser-`

`browser.web`

A polyfill is a piece of code (usually JavaScript on the Web) used to provide modern functionality on older browsers that do not natively support it.

# web-ext FTW!

<https://github.com/mozilla/web-ext>

“...it aims to support browser extensions in a standard, portable, cross-platform way.”

# Three ways to communicate

## 1. Programmatic Injection

*popup.js:*

```
document.getElementById('control').addEventListener(  
  'click',  
  function () {  
    browser.tabs.query(  
      { active: true, currentWindow: true }  
    ).then(activeTabs => {  
      browser.tabs.executeScript(  
        activeTabs[0].id,  
        { code: `// replace E's` }  
      );  
    });  
  });
```

# Three ways to communicate

## 2. Message Passing

***popup.js:***

```
browser.tabs.sendMessage(  
  activeTabs[0].id,  
  { replaceEs: true, replaceImgs: false }  
);
```

***content.js:***

```
browser.runtime.onMessage.addListener(request => {  
  if(request.replaceEs) {  
    // replace all e's  
  }  
});
```

# Three ways to communicate

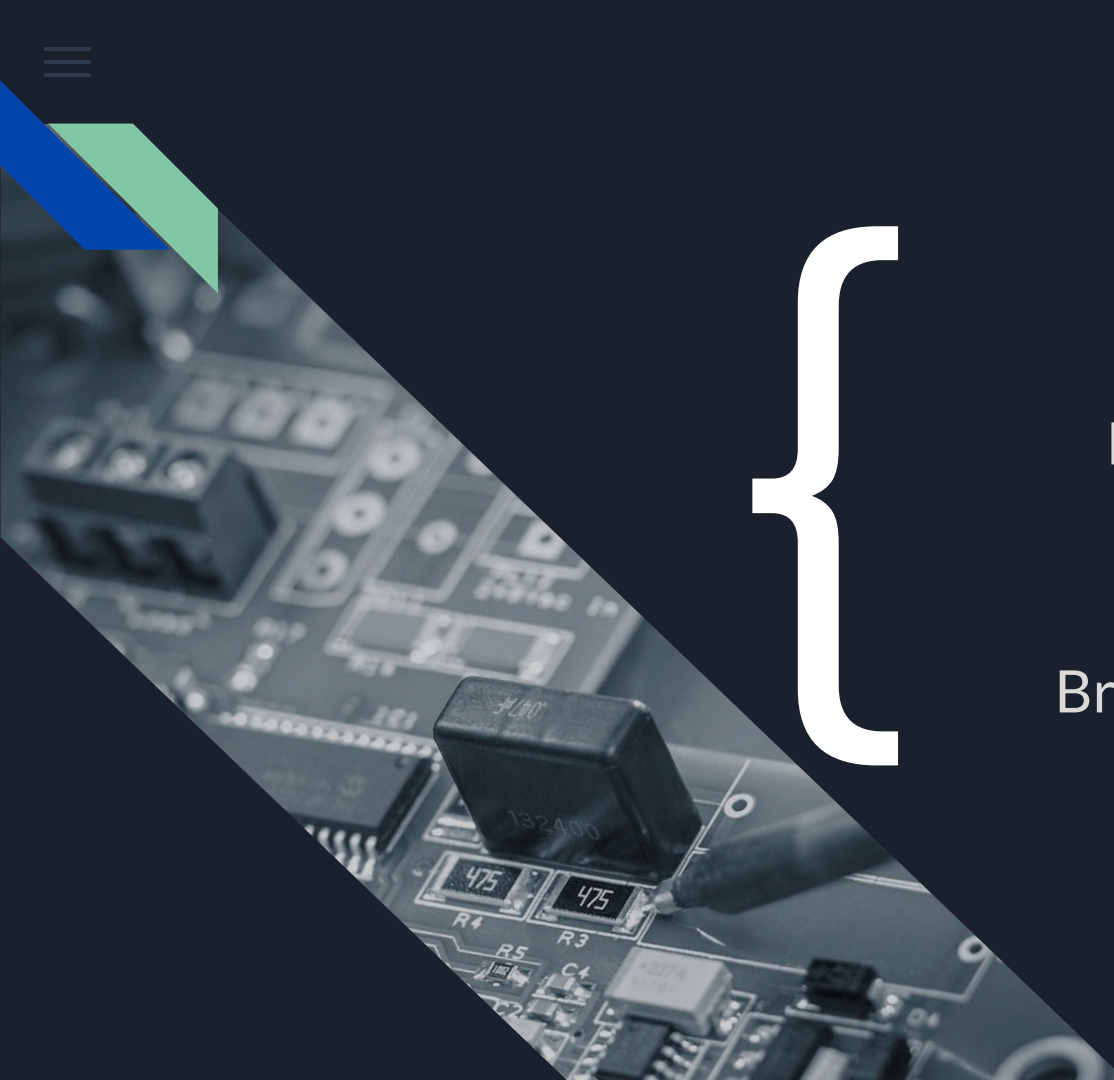

## 3. Local Storage

***popup.js:***

```
browser.storage.local.set(  
  {'pretty.kitty.settings': { replaceEs: true }}  
)  
  
  .then(() => console.log("OK"));
```

***content.js:***

```
browser.storage.local.get('pretty.kitty.settings')  
  .then(item => {  
    if (item['pretty.kitty.settings'].replaceEs) {  
      // replace E's  
    }  
  })
```
